

pdfkit-table — Header Properties

label · property · width · align · valign · headerColor · headerOpacity
headerAlign · columnColor · columnOpacity · padding · renderer

1. label · property · width

label: display text in header row | property: key in data object | width: column width in pt

ID	Name	Role	Score	Status
1	Alice	Engineer	98	Active
2	Bob	Designer	74	On leave
3	Carol	Manager	88	Active
4	David	Engineer	61	Inactive

2. align — horizontal alignment of data cell text

align: 'left' | 'center' | 'right' | 'justify' (applied to every data cell in the column)

left (default)	center	rightjustify
1	Alice	98Engineer
2	Bob	74Designer
3	Carol	88Manager
4	David	61Engineer

3. valign — vertical alignment of data cell text

valign: 'top' | 'center' | 'bottom' (visible only when row height > text height)

top (default)	center	bottom	right	bottom+right
1	Alice	98	Active	Active
2	Bob	74	On leave	On leave
3	Carol	88	Active	Active
4	David	61	Inactive	Inactive

4. headerColor · headerOpacity — header row background

headerColor: CSS color string | headerOpacity: 0–1 (default ~0.1)

default	headerColor only	color + opacity 1	opacity 0.3	dark bg
1	Alice	Engineer	98	Active
2	Bob	Designer	74	On leave
3	Carol	Manager	88	Active
4	David	Engineer	61	Inactive

5. headerAlign — alignment of the header label text

headerAlign overrides align for the header row only; data cells keep their own align

header left / data left		header center / data left	header right / data center	header left / data right
1	Alice		Engineer	98
2	Bob		Designer	74
3	Carol		Manager	88
4	David		Engineer	61

6. columnColor / backgroundColor · columnOpacity / backgroundOpacity

Tints every data cell in the column (header uses headerColor). Both aliases work.

no tint	columnColor	backgroundColor	full opacity	header + column
1	Alice	Engineer	98	Active
2	Bob	Designer	74	On leave
3	Carol	Manager	88	Active
4	David	Engineer	61	Inactive

7. padding — number | [vertical, horizontal] | { top, right, bottom, left }

padding can be set per-column on the header object, or globally via table options

pad=2 (tight)	pad=10 (loose)	pad=[8,2] v,h	pad obj t4 r16 b4 l4	global pad (opts)
1	Alice	Engineer	98	Active
2	Bob	Designer	74	On leave
3	Carol	Manager	88	Active
4	David	Engineer	61	Inactive

8. renderer — function(value, indexColumn, indexRow, row, rectRow, rectCell)

Returns the string to display. Use side-effects on doc for colours, images, etc.

Name	Score (bold if "e 90)	Status (coloured)	Score bar	Col / Row
Alice	98	Active	%~%~%~%~%~%~%~%~%~%	c4 r0
Bob	74	On leave	%~%~%~%~%~%~%~%'%'%	c4 r1
Carol	88	Active	%~%~%~%~%~%~%~%~%'%	c4 r2
David	61	Inactive	%~%~%~%~%~%~%~%'%'%	c4 r3

9. Combined — all properties on the same table

Real-world example mixing colours, alignment, padding and a renderer

Team Overview

Q2 2026 — internal use only
